

Functional & Performance Testing Template

Model Performance Test

Date	4 july 2026
Team ID	
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Home Page Response Tim	Open the application homepage and measure the page loading time.	Homepage loads within 2 seconds .	Homepage loaded in 1.4 second	pass
FT-02	HDI Prediction Response Time	Enter valid HDI input values and click Predict . Measure the response time.	Prediction generated within 3 seconds .	Prediction generated in 2.1 seconds .	pass
FT-03	Concurrent User Load Test	Simulate 50 concurrent users sending prediction requests.	Application handles all requests without crashing.	Successfully handled 50 concurrent users .	pass
FT-04	High Load Test	Simulate 100 concurrent users accessing the application simultaneously.	Server remains responsive with acceptable response time.	Average response time was 3.5 seconds	pass

FT-05	Continuous Request Test	Send prediction requests continuously for 10 minutes .	Application remains stable without memory leaks or failures.	System remained stable throughout the test.	pass
FT-06	CPU Utilization Test	Monitor CPU usage during heavy prediction requests.	CPU utilization remains below 80% .	Maximum CPU utilization was 58% .	pass
FT-07	Memory Utilization Test	Monitor memory consumption during continuous operation.	Memory usage remains below 70% .	Maximum memory usage was 62% .	pass
FT-08	API Response Performance	Send requests directly to the Flask API endpoint.	API responds successfully within 2 seconds .	Average API response time was 1.8 seconds .	pass
FT-09	Invalid Input Performance	Submit invalid or incomplete input values repeatedly.	Validation messages displayed without affecting performance.	System handled invalid inputs correctly.	pass
FT-10	Overall System Performance	Perform all major application functions under normal workload.	System performs efficiently with stable response time.	All functions executed successfully without performance issues.	pass
