

Project Design Phase

Problem – Solution Fit Template

date	2 july 2026
Team id	
Project name	A Comprehensive Measure of Well-Being
Maximum marks	2 marks

Problem: HDI analysis and prediction are complex, time-consuming, and often require manual interpretation.

Solution: An AI/ML-powered HDI Prediction and Analysis System that automates prediction, visualizes insights, and supports informed decision-making through accurate and interactive analysis.

Project Purpose

- Identify the challenges in analyzing and predicting Human Development Index (HDI) data.
- Understand the needs of researchers, students, policy makers, and data analysts.
- Provide an AI/ML-based solution for accurate HDI prediction.
- Simplify complex HDI analysis through interactive dashboards and visualizations.
- Enable easy comparison of countries based on HDI indicators.
- Support informed decision-making for research, education, and policy planning.
- Reduce manual effort, save time, and improve the accuracy of HDI analysis.

Template:

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS Who is your customer? i.e. working parents or 9 to 5s, kids • Researchers • Students • Government Policy Makers • Economists • NGOs and Development Organizations • Data Analysts • General Public interested in development data	6. CUSTOMER CONSTRAINTS CC What constraints (internal / external) from solving within or using your solution? • Limited access to accurate and updated HDI data • Lack of technical knowledge to analyze data • High cost and time required for manual analysis • Difficulty in predicting future HDI trends • Existing tools are complex and not user-friendly • Variability in data sources and measurement methods	5. AVAILABLE SOLUTIONS AS What solutions are available to the customers when they face the problem or need to get the job done? How are they solving it today? What push & down these solutions have? (i.e. pros and cons) • Manual analysis using Excel • UNDP reports and dashboards • Statistical software (SPSS, R, Python libraries) • Government and research publications Push: Time-consuming, not predictive, less interactive Pull: Reliable, faster, predictive, easy to interpret	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS JtBP What job-to-be-done (or problem) do you address for your customer? How could be more than one, explore different sides. • Analyze and understand HDI of countries • Predict future HDI based on key indicators • Compare HDI performance across countries • Identify factors affecting human development • Generate reports for research or policy making	9. PROBLEM ROOT CAUSE RC Why is the customer not able to problem solve? What is the root cause behind the problem-to-be-solve? i.e. customers have to do it because of the charge in regulations. • Data is scattered across different sources • Lack of real-time prediction models • Manual processes are slow and error-prone • Complex calculations and data relationships • Lack of interactive visualization and comparison tools	7. BEHAVIOUR BE What do your customer do to address the problem and get the job done? i.e. already shifted, first thought, wider goal, mindset, relative angle and who velocity associated customer, spend the time on, outsourcing want, E.g. Greenpeace • Search for data in reports or databases • Use Excel or statistical tools for manual analysis • Compare countries using rankings • Rely on expert opinions and research papers • Spend time cleaning and organizing data	
Focus on JtBP, try into RC, understand RC	3. TRIGGERS TR What triggers customers to act? i.e. seeing their neighbour trending new trends, reading about a move efficient solution in the news. • Release of new HDI reports • Need for academic research or presentations • Policy planning or decision-making requirements • Increasing interest in human development indicators	10. YOUR SOLUTION SL If you are working on an existing business, write down your current solution first, then zoom out & think how you can improve it. If you are working on a new business (greenfield), then zoom out & write JtBP in the interviews and come up with a solution that fits entire customer behaviour. Write a problem and reaction-customer behaviour. HDI Prediction and Analysis System • Predict HDI using Machine Learning models • Analyze and compare countries easily • Interactive dashboards with visual insights • Identify key factors influencing HDI • Generate downloadable reports and insights • User-friendly interface for all users	8. CHANNELS of BEHAVIOUR CH 8.1 ONLINE What kind of actions do customers take online? Ex: social online channels from IT? • Search engines (Google, Bing) • Research portals and academic websites • Social media (LinkedIn, Twitter, ResearchGate) • Data repositories and online dashboards	Extract online & offline CH of BE
	4. EMOTIONS: BEFORE / AFTER EM How do customers feel when they face a problem? or a job not addressed? i.e. lost, insecure > confident, in control – use it in your communication strategy & design. Before: Confused, overwhelmed, unsure of accuracy, frustrated with manual data work After: Confident, informed, satisfied, empowered to make better decisions		8.2 OFFLINE What kind of actions do customers take offline? Exact offline channels from IT and use them for customer development. • Academic conferences, seminars • Government meetings, workshops • Printed reports and journals • Word of mouth and expert recommendations
