

**Project Design Phase
Proposed Solution Template**

Date	2 july 2026
Team ID	
Project Name	A Comprehensive Measure of Well-Being
Maximum marks	2 marks

Proposed Solution Template:

S.No	Parameter	Description
1	Problem statement	Analyzing and predicting the Human Development Index (HDI) is difficult due to scattered data, manual calculations, and limited prediction tools. Researchers, students, and policymakers need a faster and more accurate way to analyze HDI and compare countries
2	solution	Develop a Machine Learning-based HDI Prediction and Analysis System that predicts HDI values using indicators such as Life Expectancy, Education Index, and GNI per Capita. The system provides interactive dashboards, country comparisons, visualizations, and downloadable reports.
3	uniqueness	The system combines HDI prediction, visual analytics, country comparison, and development-level classification (Very High, High, Medium, Low) in a single user-friendly platform, making analysis faster and easier than traditional methods
4	Customer satisfaction	The project supports researchers, students, government agencies, and NGOs by providing accurate insights for research and policy planning. It saves time, improves decision-making, and simplifies complex HDI analysis, leading to higher user satisfaction
5	Business model	Freemium model with free basic features and premium services such as advanced analytics, detailed reports, API access, and institutional subscriptions for universities, research organizations, and government departments.
6	Scalability	The system can be expanded to include more countries, additional socio-economic indicators, real-time data updates, and cloud deployment. It is capable of supporting

		multiple users and future machine learning model improvements
